## Abstract

This report documents the GPS ground surveys conducted in support of FEMA accuracy testing of the lidar data collection for Wood County in 2015. Surveys were conducted at various sites utilizing the base stations established in the static network. These surveys established "ground truth" data at each site on different surface types, including low grass, high grass, low trees, high trees and urban areas. Statistical comparisons were made between ground truth points collected from the ground survey and the elevation at the associated horizontal coordinates represented on the lidar-derived digital terrain model.

## Data Analysis

To qualify as an acceptable accuracy test, the lidar data must be compared with a dataset of higher accuracy – in this instance, ground survey. To develop a comparable dataset of points from the lidar dataset, a utility from proprietary software was used.

The ground control survey results were imported into an ESRI PointZ shapefile with each point's information as attributes. The utility then accessed the lidar and generated a triangulated irregular network (TIN), which is a continuous digital terrain surface, using the bare-earth lidar points and the compiled breaklines. The utility probed the TIN surface to determine its elevations at each of the survey point's horizontal locations.

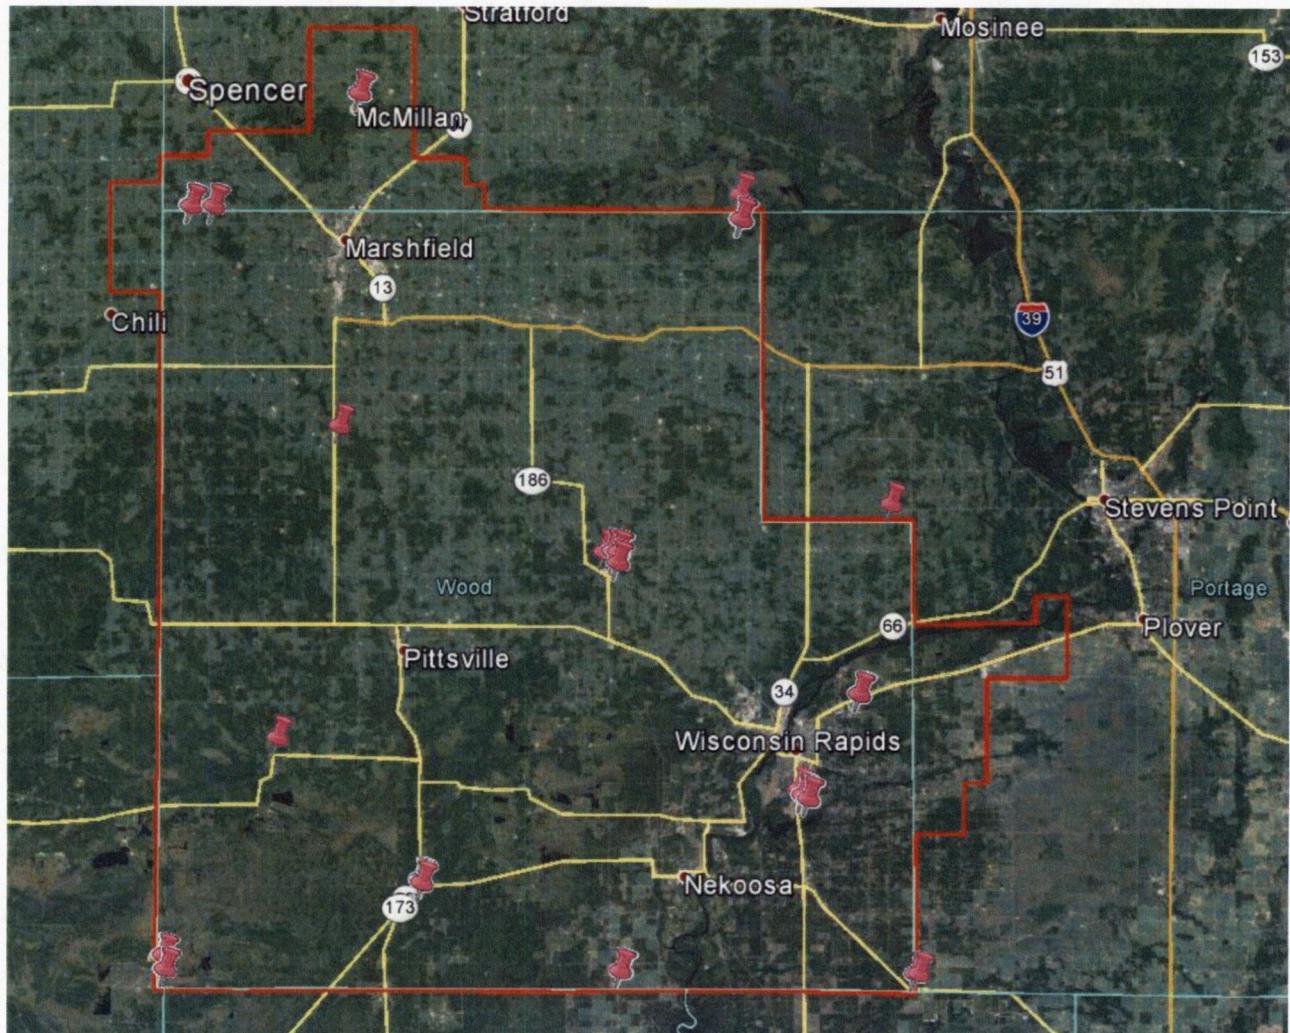

The elevation was then appended as a field to the PointZ shapefile; the attributes for each point were exported to a database and then statistical analysis was performed. The results can be seen on the following pages.

## Overall Accuracy

A comparison of the ground survey versus lidar model values indicates a vertical root mean square error (RMSEz) of 0.399 feet. This is within the FEMA specified vertical accuracy tolerance of 0.61 feet. This RMSEz equates to a tested 0.781 feet vertical accuracy at 95% confidence level.

## Ground Truth Survey Locations

The ground survey test points were distributed and categorized into sites as shown in the map below:

## Ground Truth Analysis Reference Information

*Coordinate System* – Wisconsin Coordinate Reference System (WISCRS) – Wood County

*Horizontal Datum* – NAD83 (11)

*Vertical Datum* – NAVD88 (Geoid 12A), survey feet

### Field Definitions

*Number* – The designation given to the ground survey point to identify it with its coordinates and land cover type.

*Easting, Northing and KnownZ* – The coordinates that describe the point's horizontal and vertical location within the Trempealeau County WISCRS Coordinate System. The Easting and Northing values are shared between the ground control points and lidar comparison points. The KnownZ field shows the elevation of the survey number. The lidar comparison point's elevation is implicit in the analysis' Delta Z.

*Delta Z* – The error, the difference between the elevation at a horizontal location as determined by ground survey and as determined by the lidar dataset.

*Laser Z* – The elevation at a horizontal location as determined by the lidar dataset.

*Landcover Types* – The predominant land cover category at the location of the survey point.

<b>Land Cover Type</b>	<b>Description</b>
Low Grass	Lawns, golf courses, plowed fields
Tall Grass	High grass, weeds, crop fields
Low Trees	Brush, shrubs
Tall Trees	Fully forested (hardwood, evergreens, mixed forests)
Urban	Asphalt, concrete

## Statistical Definitions

---

*RMSEz* – The root mean squared error, the square root of the average of the squared errors.

*Average Delta Z* – The average of the Delta Z squared values.

*Minimum Delta Z* – The minimum of the Delta Z squared values.

*Maximum Delta Z* – The maximum of the Delta Z squared values.

*Accuracy Z* – The product of multiplying the RMSEz with 1.96.
